EDUCATION

University of California, Davis
BS in Computer Science, GPA: 3.73

Sept 2023 – Mar 2027

- **Coursework:** Data Structures and Algorithm Design/Analysis, Computer Architecture, Intro to Artificial Intelligence, Operating Systems and Systems Programming, Databases, Modern Natural Language Processing, Computer Networks
- **Involvement:** Google Developer Student Club, Codelab, Davis Undergraduate Engineering Network

WORK EXPERIENCE

Los Angeles Dodgers
Software Engineer Intern

Davis, CA

Nov 2025 – Jun 2026

- **Built and deployed an automated pitching biomechanics model** that extracts arm angle and release point data from 200+ minor league videos at 91% accuracy, directly feeding the Dodgers' annual talent draft decisions.
- **Replaced manual scout video review with skeletal tracking and physics simulation**, cutting evaluation turnaround and giving scouts a repeatable, data-driven metric for prospect assessment.

Benevolent Bandwidth Foundation
Software Engineer – Contract

Davis, CA

Jan 2026 – Jun 2026

- **Shipped a full-stack delivery route optimization tool** in Next.js that allows small business owners (e.g. flower shops) generate optimized 30-stop routes in a single click, eliminating manual route sequencing.
- **Engineered a zero-collection session persistence layer** using sessionStorage with retry-on-refresh recovery, preserving full optimizer state (vehicles, addresses, time windows) across navigations without storing any user data server-side.

Davis Undergraduate Engineering Network 
Lead Software Developer / Project Manager

Davis, CA

Aug 2025 – Dec 2025

- **Led development of the organization's website**, directing a team of 8 CS majors from planning through launch.
- **Trained 8 first-time contributors in Git and React fundamentals**, enabling the team to independently ship features and manage pull requests within the semester.
- **Designed and shipped a new Projects showcase page**, highlighting previous club engineering projects and **contributing to a 28% increase in student applications** the following recruitment cycle.

PROJECTS

LEANCODE: Context-Aware Codebase Simplification for LLMs 

Jan 2026 – Mar 2026

- **Engineered a batched attention extraction pipeline** across 908k Java training samples using fine-tuned CodeBERT and CodeT5 generative models, implementing CLS attention and encoder-decoder cross-attention from safetensors checkpoints with a custom 6-layer Transformer decoder added to CodeBERT for seq2seq generation.
- **Cut AST-to-subword alignment cost from $O(W \times T)$ to $O(W + T)$** per sample via a single-pass character offset map, unlocking GPU-batched inference across the full training set.
- **Reproduced LEANCODE's context-aware token pruning** on the CodeSearchNet Java benchmark, preserving 94.52% of MRR and 89.83% of BLEU-4 at 50% token removal.
 - Tools: Python, PyTorch, HuggingFace, CodeBERT, CodeT5, tree-sitter

Portfolio Diversification & Risk Assessment Analyzer 

Jan 2026 – Jun 2026

- **Built a hierarchical K-Medoids clustering pipeline** that ranks all Russell 2000 stocks by mean distance correlation, recommending the 12 least-correlated stocks to diversify a user's portfolio.
- **Quantified downside risk with a Monte Carlo module** simulating 100 price paths per stock to compute VaR, CVaR, and drawdown ahead of trade decisions.
- **Automated ingestion of daily market data via a cloud scheduler**, keeping 5+ years of simulations and the live interface current with zero manual maintenance.
 - Tools: Python, BigQuery, NumPy, Pandas, scikit-learn, Next.js, TypeScript, React, Yahoo Finance

Aggie Housing 

Dec 2024 – June 2025

- **Consolidated every Davis-area apartment listing into a single platform** used by 50+ students, eliminating the need to cross-reference dozens of individual apartment websites for pricing and availability.
- **Integrated and maintained 120+ apartment listings in Supabase**, powering real-time filtering by pricing, layout, and distance from campus.
- **Automated apartment ranking with NLP-based sentiment analysis** across 500+ merged Google and Yelp reviews, removing the need for users to manually read reviews.
 - Tools: React, JavaScript, HTML/CSS, Flask, Python, Supabase, NLTK, Git

SKILLS

- **Languages:** C++, C, Python, Java, JavaScript, TypeScript, HTML, CSS, Assembly
- **Frameworks:** React, FastAPI, Next.js, Node.js, Flask, Tailwind CSS, TensorFlow, PyTorch
- **Developer Tools:** Git, Figma, Google Colab, Supabase, Google Cloud, Jupyter Notebook
- **Libraries:** Pandas, NumPy, Matplotlib, Scikit-Learn, OpenCV, YOLO, NLTK
